Alternate Business – Equity Investment Process

Our Investment Philosophy

To identify & capitalize upon the prevailing market inefficiencies in a Simple, Timely & Efficient manner

Focus on Businesses

With ability & commitment to grow earnings faster than Nominal GDP

Purchase at Reasonable Price

Entry Level valuations which accord "Margin of safety"

Buy Companies that have

- Large Opportunity Canvas
(scope for non-linear growth outcomes)
- Credible Management
- Emphasis on Capital Efficiency
- Superior return ratios

Portfolio Construction Process

Investment Process - Screening & Risk Management

ABSL Top 200 Core Equity Portfolio

Investment Objective & Strategy

Focus on Long Term Wealth Creation

Investment Objective/ Philosophy

Follows both Top down & Bottom-up approach

Industries with strong operating dynamics

Businesses core to the India growth story

Unconstrained by Sectors or Themes

Attractive Valuation with “Margin of safety”

Wealth Creation Approach

Recurring Winners - High Quality businesses with consistent growth
Companies with Scalability and Resilience Benchmark-agnostic

Multi Cap Universe

Concentrated Portfolio

Value drivers

High ROEs/ROCEs

Sustainable earnings growth

Low leverage

High quality franchise, product, service

Superior management team

4 Pillars of our Investment Process

Concentrated Portfolio | Benchmark agnostic | Predominantly Large Cap universe

Sustainable Wealth Creation

GDP growth pattern tilted in favor of few industries

Sustainable growth over medium to long term in select industries

Recurring Winners: Focus on businesses that have consistently created VALUE

- Favorable industry operating dynamics key to wealth creation
- Consistent growth/returns profile, reflected in high ROE/ROCE

Unique strategy based on Superior Screening process

- Extensive research to identify future winners
- Comprehensive alert system to track industry wise valuations

Value investing approach to generate alpha

- Buy quality businesses at a discount to their intrinsic value
- High margin of safety

Pillar 1: GDP growth patterns favor some sectors more

*Sum of components>100% as imports are not accounted for (negative entry). Source: MOSPI

Pillar 2: Recurring Winners

- Research over the long term proves that shareholder wealth creation is mainly determined by strong operating dynamics such as competition levels, ease of entry by new players, bargaining power of buyers/suppliers etc.
- Focus on industries with lower competitive intensity that are more direct beneficiaries of consumer spending, enjoying stable growth, and are less vulnerable
- Companies with superior management and strong business models coupled with favorable industry operating dynamics generate superior value and returns consistently

Industry dynamics - Key to capture value

Commercial Banks

- Entry barriers in the form of licenses
- Very limited customer bargaining power

Pharmaceuticals

- Large and growing addressable market
- Entry barriers in form of size, capital, regulations & research capabilities

IT Services

- Arbitrage- India's cost advantage vs global players
- Limited supplier power (employees) in terms of salary costs

Capital Goods

- Large & growing addressable market
- Strong and large balance sheets acting as performance anchors

FMCG

- Brand franchise and distribution scale driven entry barriers
- Ingrained sustainability, healthy margins & return ratios

Pillar 3: Effective Screeners backed by Fundamental Research

Superior screening process

- **Extensive fundamental research** to identify future winners that create superior and sustained value
- **Comprehensive alert systems** to track industry wise valuation of each company
- Identify **growth** industries and businesses at **attractive valuations**

Bottom-up Fundamental Research adds conviction

- Focus on understanding company strategy, management and execution
- Track sector developments, meet industry participants across value chains and company management to discern changing trends

Bottom-up Fundamental Research

Pillar 4: Attractive Valuation with “Margin of Safety”

- Buy quality growth stocks at a **discount to their intrinsic value**
- Proprietary screeners enable discovery of the undervalued stocks that will create significant value over medium to long term
- Invest in a company only if there is a visibility of a **minimum threshold return and limited down-side**

- ★ He brings extensive experience across leading financial institutions, having held roles at ICICI Bank, Fidelity Mutual Fund, SBI Mutual Fund, Edelweiss Alternatives, and Kotak Alternatives.

Risk Factors & Disclaimers

Risk Factors associated with investments in Equity & Equity related securities:

- Risk arising from the investment objective, investment strategy, asset allocation and quant model risk:
- Market risk, political and geopolitical risk and risk arising from changing business dynamics, which may affect portfolio returns. At times, portfolios of individual clients may be concentrated in certain companies/industries. The performance of the portfolios would depend on the performance of such companies / industries / sectors of the economy.
- The portfolio proposes to invest in equity and equity related securities. Equity and Equity related securities by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors.
- The value of the portfolio will fluctuate as the daily prices of the individual securities in which they invest fluctuate and may be worth more or less than its original cost, at a given point in time.
- In respect of investments in equity and equity-related instruments, there may be risks associated with trading volumes, settlement periods and transfer procedures that may restrict liquidity of investments in equity and equity related securities.
- The value of the portfolio may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets.
- Within the regulatory limits applicable at any point in time, the Portfolio Manager may choose to invest in unlisted securities that offer attractive yields. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. This may however increase the risk of the portfolio. The liquidity and valuation of the portfolio's investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of disinvestments
- Investment made in unlisted equity or equity-related securities may only be realizable upon listing of these securities. Settlement problems could cause the portfolio to miss certain investment opportunities.
- Investors may note that Portfolio Manager's investment decisions may not always be profitable, as actual market movements may be at variance with anticipated trends.
- Though the constituent stocks of most indices are typically liquid, liquidity differs across stocks. Due to the heterogeneity in liquidity in the capital market segment, trades on this segment may not get implemented instantly.
- The portfolio may have higher concentration towards a particular stock or sector, at a given point in time. Any change in government policy or any other adverse development with respect to such a stock or the sector, may adversely affect the value of the portfolio.
- The Portfolio Manager does not intend to invest in foreign securities.
- The Portfolio Manager does not intend to engage in short selling or stock lending.
- The portfolio also proposes to invest in derivative instruments. However, the portfolio manager does not intend to write options. The Portfolio manager intends to use exchange traded derivatives as a hedging tool & does not intend to take any naked positions. Nevertheless, trading in derivatives market has risks and issues concerning the use of derivatives that investor should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds.

Risk Factors & Disclaimers

- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Even a small price movement in the underlying security could have a large impact on their value. Execution of such strategies depends upon the ability of the Portfolio Manager to identify such opportunities. Identification and execution of such strategies to be persuaded by the Portfolio Manager involve uncertainty and decision of the Portfolio Manager may not always be profitable. No assurance can be given that the Portfolio Manager shall be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risk associated with investing directly in securities and other traditional investments. As and when the product trades in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself.
- Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value.
- The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Derivative trades involve execution risks, whereby the rates seen on the screen may not be the rate at which ultimate execution takes place. The options buyer's risk is limited to the premium paid, while the risk of an options writer is unlimited. However, the gains of an options writer are limited to the premiums earned. The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price. Investments in index futures face the same risk as the investments in a portfolio of shares representing an index. The extent of loss is the same as in the underlying stocks. Risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and potential high volatility of the futures markets.
- The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility in the values. The Portfolio Manager may, from time to time, invest any un-deployed funds in Liquid Portfolio of PMS or in money market instruments. Though the portfolio of liquid funds comprises of short-term deposits, government securities and money market instruments, they cannot be considered as totally risk free. This is because liquidity patterns and short term interest rates of the government change, sometimes on a daily basis, thereby making the fund susceptible. Liquid Portfolio returns are not guaranteed and it entirely depends on market movements.

Disclaimer: The views expressed above are the views of the Portfolio Managers of the portfolio. They should not be construed as investment advice.

Investments in securities are subject to market risks and there can be no assurance or guarantee that the objectives of the Product will be achieved. **Past performance may or may not be sustained in future.**
